

NVivo eWorkshop

Classifying Data and Coding Queries

This interactive workshop will take you beyond the basics to asking questions of your data using categorical data and coding queries.

This eWorkshop is for NVivo for Windows users.

A course for those who have taken a prior course or have experience with importing and coding data in NVivo.

Course outline

Classifications and Attributes

- Importing “classifying” or categorical data such as demographics or fixed response survey items
- Associating classifying data with your text, PDF, dataset, image or media sources

Exploring your data

- Running coding based queries including coding, matrix coding, and group queries
- Saving queries and storing your results

What will you achieve from this course?

At the end of this eWorkshop, you will have the knowledge to take your analysis beyond coding to integrate categorical data, and conduct within, and between, group queries.

Be sure to consider all of the eWorkshops available to get the most out of your work with NVivo.
