

# NVivo eWorkshop

## Datasets and Web Content

This interactive workshop introduces importing and coding of datasets, which may include fixed response and open-ended survey questions, or social media or other data gathered through NCapture.

(Note: If you are gathering static snapshots of web content as PDF files through NCapture, please consider the eWorkshop Analyzing Text in NVivo.)

A course for those with a special interest in survey data or social media content from the web.

**This eWorkshop is for NVivo for Windows users.**

### Course outline

#### Introducing NVivo and setting up a project

- Introducing NVivo's workspace
- Creating and navigating around a project

#### Working with your information

- Gathering datasets through NCapture
- Importing dataset sources (.xls, .txt, .ncvx [NCapture])

#### Sorting, organizing and analyzing your information

- Introducing 'nodes' including node folders and creating nodes
- Auto coding to organize data by respondent, social media 'user,' comment thread, or survey question
- Identifying themes, topics or ideas and collecting data to support them

### What will you achieve from this course?

At the end of this eWorkshop, you will have the knowledge to set up a project in NVivo, import your dataset and begin to work with it. Other eWorkshops offer tools for deeper analysis and work with other types of data. Discover how to ask questions of your data, show links between information and create reports. Visit our [Training & Events Calendar](#) for more information.
