

# NVivo eWorkshop

## Further Analysis in NVivo

This hands-on eWorkshop takes you beyond the basics to asking questions of your data using grouping tools, text analysis, queries, and visualizations.

A course for those who have attended the NVivo Essentials course or for those who are familiar with what's covered in this course and have a project started.

**This eWorkshop is for NVivo for Windows users.**

This course is ideal for NVivo users who have taken the NVivo Essentials eWorkshop or for those who have worked with previous versions of NVivo software. Here's an outline of the course:

### Course Outline

#### **Models and relationships**

- Building and working with models as a way to display ideas
- Creating and showing relationships in your data

#### **Grouping your data: collections and links**

- Organizing your data into 'sets' and search folders
- Finding items in your project quickly and easily
- Creating other types of links in your data

#### **Exploring your data**

- Using text analysis tools including word frequency and text search queries
- Running coding based queries including coding, matrix coding, and group queries
- Saving queries and storing your results

#### **Visualizing your data**

- Creating two and three dimensional charts to illustrate findings
- Presenting query results as 'tree maps' and 'word trees' to show patterns in your data

#### **Reporting and presenting your findings**

- Creating standard and custom reports and extracts

### **What will achieve from this course?**

At the end of the NVivo Advanced eWorkshop, you will have the knowledge to drill down into your data using NVivo software. You will also have the skills to organize and explore your data, identify relationships, use diagrams to show patterns in your information and create reports.

QSR International offers Further Analysis in NVivo as a face-to-face workshop. If you prefer an online workshop, [check what's coming up](#).
